PS Claim 5; Page 32; 41pp; English.
XX
CC Adherence of oral pathogens, particularly to tooth surfaces, can be
CC prevented by application of a fibronectin binding protein or polypeptide.
CC The fibronectin binding protein or polypeptide is useful in the
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC related development of carious lesions, gingivitis, calculus or
CC periodontal disease and to combat oral cavity infections, e.g.
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC Staphylococcus aureus with a P838T substitution. (Updated on 16-OCT-2003
CC to standardise OS field)

 PT Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 PT stored on computer readable medium and used in the production of anti-
 PT S. aureus vaccines.
 XX
 PS Claim 23; Page 3259-3261; 3271pp; English.
 XX
 CC This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the S. aureus proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the S. aureus DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against S. aureus infection. The polypeptides can also be used in a kit
 CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptide.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
 CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 C:Comment: This glycoprotein is found on lymphoid and myeloid cell surfaces.
 C:Superfamily: leukocyte common antigen; leukocyte common antigen cytosolic domain homol
 C:Keywords: alternative splicing; duplication; glycoprotein; phosphoprotein; phosphoric n
 F:1-23/Domain: signal sequence #status predicted <SIG>
 F:124-1273/Product: leukocyte common antigen precursor, splice form 4 #status predicted <P
 F:24-546/Domain: extracellular #status predicted <EXT>
 F:24-30,122-1273/Product: leukocyte common antigen, splice form 1 #status predicted <MAT
 F:24-30,163-1273/Product: leukocyte common antigen, splice form 3 #status predicted
 F:24-30,73-121,163-218/Product: leukocyte common antigen, splice form 3 #status predicted
 F:547-568/Domain: transmembrane #status predicted <TM>
 F:565-1206/Domain: leukocyte common antigen cytosolic domain homology <LAC>
 F:569-1273/Domain: intracellular #status predicted <INT>
 F:566-870/Domain: protein-tyrosine-phosphatase homology <PPP>
 F:612-142,153,164,178,200,245,271,282,327,371,374,502/Binding site: carbohydrate (Asn) (cc
 F:822/Active site: Cys (phosphocysteine intermediate) #status predicted
 F:828/Binding site: substrate phosphate (Arg) #status predicted
 F:1063/Binding site: carbohydrate (Asn) (covalent) #status absent

 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from Staphylococcus aureus: use of this peptide sequence in the
 synthesis of biologically active peptides";
 RT Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 RL -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 proposed as a virulence factor enabling bacteria to colonize wound
 tissues and blood clots. Binding of plasma fibronectin to the
 bacterial surface might block adhesion receptors on S.aureus, thus
 representing an important defense mechanism against tissue
 invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 an amide bond (Potential).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 XX
 PS Example 8; Page 102; 201pp; English.
 XX
 CC The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-antibinding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC protein-antibinding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW6561-700 represent a series of
 CC synthetic peptides based on the D1 region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

PS Claim 5; Page 31-32; 41pp; English.

XX Adherence of oral pathogens, particularly to tooth surfaces, can be

CC prevented by application of a fibronectin binding protein or polypeptide.

CC The fibronectin binding protein or polypeptide is useful in the

CC manufacture of oral hygiene compositions, eg. toothpaste, liquid

CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-

CC related development of carious lesions, gingivitis, calculus or

CC periodontal disease and to combat oral cavity infections, e.g.

CC candidiasis. They may also be useful in oral surgery e.g. in guided

CC tissue regeneration procedures to prevent subsequent bacterial infection,

CC and for irrigation of periodontal pockets. This sequence corresponds to

CC amino acids 709-838 of the D1-D4 fibronectin binding domain of

CC Staphylococcus aureus with a P838T substitution

PS Example 2; Fig 8A-B; 130pp; English.

XX

XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that

CC comprise at least one cytokine-encoding DNA sequence. The expression of

CC cytokines in mammals can up-regulate immune responses to the immunogens.

CC The cytokine is selected from interleukins (IL), colony stimulating

CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The

CC BHV-2 based vector or recombinant virus can be used as vaccines. They can

CC be used for preventing or treating a mucosal disease in a subject, e.g.

CC runtaunts, cattle, sheep, goats, dogs, cats, horses, or man, particularly

CC mastitis in cows or breast cancers in humans. They can also be used for

CC preventing or treating a stress-induced disease. The present sequence

CC represent a S. aureus fibronectin binding protein binding domain

CC sequence FnBAB, the gene cloned for use in this invention. The gene has

CC 97.8 percent identity when compared to the previously published sequences

CC FnBA and FnBB

PT Antibody that interacts with collagen binding domain of Staphylococcal
 PT cna gene product - useful to prevent bacterial sepsis in animal infected
 PT with Staphylococcus aureus.

PS Disclosure; Page 91; 143pp; English.

XX This protein comprises Staphylococcus aureus fibronectin-binding
 CC microbial surface component recognising adhesive matrix molecule (MSCRAM)
 CC derivative POD, plus a vector-derived N-terminal peptide. The invention
 CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
 CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
 CC AAW1552-54) that confer protection against S. aureus infection. CBP
 CC protein and antigenic epitopes are contemplated for use in the treatment
 CC of pathological infections, especially to prevent bacterial adhesion to
 CC collagen. The epitopes are also contemplated for use in the preparation
 CC of vaccines and as carrier proteins in vaccine formulations, as well as
 CC in the formulation of compositions for the prevention of S. aureus
 CC infection. pCF33 and POD (see AAW31556) were used to raise anti-MSCRAM
 CC polyclonal antibodies used in passive immunisation against bovine
 CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
 CC AUG-2003 to correct OS field.)

 XX Prevention of adherence of oral pathogens in the oral cavity, partic.
 PT tooth surfaces - by application of a fibronection binding protein or
 PT polypeptide or a monoclonal antibody or fragment against it.
 XX
 XX Claim 5; Page 31; 41pp; English.
 XX
 XX Adherence of oral pathogens, particularly to tooth surfaces, can be
 CC prevented by application of a fibronection binding protein or polypeptide.
 CC The fibronection binding protein or polypeptide is useful in the
 CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
 CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
 CC related development of carious lesions, gingivitis, calculus or
 CC periodontal disease and to combat oral cavity infections, e.g.
 CC candidiasis. They may also be useful in oral surgery e.g. in guided
 CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to
 CC amino acids 709-886 of the D1-D4 fibronection binding domain of
 CC Staphylococcus aureus

 DR
 XX Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 PT stored on computer readable medium and used in the production of anti-
 PT S. aureus vaccines.
 XX
 XX Claim 23; Page 3259-3261; 3271pp; English.
 PS
 XX This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the S. aureus proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the S. aureus DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against S. aureus infection. The polypeptides can also be used in a kit
 CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
 CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from Staphylococcus aureus: use of this peptide sequence in the
 synthesis of biologically active peptides".
 RT Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 RL -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 proposed as a virulence factor enabling bacteria to colonize wound
 tissues and blood clots. Binding of plasma fibronectin to the
 bacterial surface might block adhesion receptors on S.aureus, thus
 representing an important defense mechanism against tissue
 invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 an amide bond (Potential).

XX
XX Antibody that binds to fibronectin-binding protein, preventing its
XX binding to fibronectin - used to treat or prevent bacterial infection,
XX especially by Staphylococci and Streptococci.
XX
XX Example 2; Page 92; 201pp; English.
XX
XX The invention relates to antibodies that bind to a fibronectin-binding
XX domain of a fibronectin-binding protein, and inhibit binding of the
XX protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX protein containing at least one peptide of a fibronectin-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or
XX streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
XX mastitis in cattle, abortion in horses and many others. Since the
XX antibodies block binding of bacteria, they should be effective against
XX antibiotic-resistant strains, and may replace antibiotic therapy or
XX increase its effectiveness. Sequences AAW65659-68 represent synthetic
XX epitopes from the fibronectin binding domains DV and D1-D4 of the S.

XX

CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that

CC comprise at least one cytokine-encoding DNA sequence. The expression of

CC cytokines in mammals can up-regulate immune responses to the immunogen.

CC The cytokine is selected from interleukins (IL), colony stimulating

CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The

CC BHV-2 based vector or recombinant virus can be used as vaccines. They can

CC be used for preventing or treating a mucosal disease in a subject, e.g.

CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly

CC mastitis in cows or breast cancers in humans. They can also be used for

CC preventing or treating a stress-induced disease. The present sequence

CC represent a S. aureus fibronectin binding protein binding domain

CC sequence FnBAB, the gene cloned for use in this invention. The gene has

CC 97.8 percent identity when compared to the previously published sequences

XX New bovine herpes virus-2 vectors.

XX Example 2; Fig 8A-B; 130pp; English.

CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published S. aureus
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FNBA, cloned for use in this invention has 97.6 percent
 CC identity when compared to the previously published FNBA and FNBB gene
 CC sequences

PT Antibody that interacts with collagen binding domain of Staphylococcal
 PT cna gene product - useful to prevent bacterial sepsis in animal infected
 PT with Staphylococcus aureus.

PS Disclosure; Page 91; 143pp; English.

XX This protein comprises Staphylococcus aureus fibronectin-binding
 CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)
 CC derivative POD, plus a vector-derived N-terminal peptide. The invention
 CC relates to claimed nucleic acid sequences (see AAY3436-38) encoding S.
 CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
 CC AAW31552-54) that confer protection against S. aureus infection. CBP
 CC protein and antigenic epitopes are contemplated for use in the treatment
 CC of pathological infections, especially to prevent bacterial adhesion to
 CC collagen. The epitopes are also contemplated for use in the preparation
 CC of vaccines and as carrier proteins in vaccine formulations, as well as
 CC in the formulation of compositions for the prevention of S. aureus
 CC infection. pCE33 and POD (see AAW31556) were used to raise anti-MSCRAMM
 CC polyclonal antibodies used in passive immunisation against bovine
 CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
 CC AUG-2003 to correct OS field.)

PS Claim 5; Page 32; 41pp; English.
XX
CC Adherence of oral pathogens, particularly to tooth surfaces, can be
CC prevented by application of a fibronectin binding protein or polypeptide.
CC The fibronectin binding protein or polypeptide is useful in the
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC related development of carious lesions, gingivitis, calculus or
CC periodontal disease and to combat oral cavity infections, e.g.
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC Staphylococcus aureus with a P838T substitution. (Updated on 16-OCT-2003

 PS Claim 23; Page 3259-3261; 3271pp; English.
 XX
 CC This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the S. aureus proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the S. aureus DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against S. aureus infection. The polypeptides can also be used in a kit
 CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
 CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysts of the total score distribution.

RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides.";
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

Antibody that binds to fibronectin-binding protein, preventing its
binding to fibronectin - used to treat or prevent bacterial infection,
especially by Staphylococci and Streptococci.
Example 8, Page 102, 201pp, English.
The invention relates to antibodies that bind to a fibronectin-binding
domain of a fibronectin-binding protein, and inhibit binding of the
protein to fibronectin. Also claimed are: (1) isolated peptides of a
fibronectin-binding protein that do not bind to fibronectin; (2) fusion
protein containing at least one peptide of a fibronectin-binding protein
linked to a second amino acid sequence; (3) nucleic acid encoding the
isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
nucleic acids are all useful for immunisation (active or passive) and (b)
inhibiting binding of bacteria to fibronectin for preventing or treating
infection in humans or other animals, particularly by staphylococci or

```
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65691-700 represent a series of
CC synthetic peptides based on the D1 region of S. aureus fibronectin
CC binding protein A. They were synthesised to contain mutations

XX
CC Adherence of oral pathogens, particularly to tooth surfaces, can be
CC prevented by application of a fibronectin binding protein or polypeptide.
CC The fibronectin binding protein or polypeptide is useful in the
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC related development of carious lesions, gingivitis, calculus or
CC periodontal disease and to combat oral cavity infections, e.g.
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC Staphylococcus aureus

CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that

CC comprise at least one cytokine-encoding DNA sequence. The expression of

CC cytokines in mammals can up-regulate immune responses to the immunogens.

CC The cytokine is selected from interleukins (IL), colony stimulating

CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The

CC BHV-2 based vector or recombinant virus can be used as vaccines. They can

CC be used for preventing or treating a mucosal disease in a subject, e.g.

CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly

CC mastitis in cows or breast cancers in humans. They can also be used for

CC preventing or treating a stress-induced disease. The present sequence

CC represents a S. aureus fibronectin binding protein binding domain

CC sequence FnBAB, the gene cloned for use in this invention. The gene has

CC 97.8 percent identity when compared to the previously published sequences

CC FnBA and FnBB

XX Prevention of adherence of oral pathogens in the oral cavity, partic.
PT tooth surfaces - by application of a fibronectin binding protein or
PT polypeptide or a monoclonal antibody or fragment against it.
XX
XX
XX Claim 5; Page 32; 41pp; English.
XX
XX Adherence of oral pathogens, particularly to tooth surfaces, can be
CC prevented by application of a fibronectin binding protein or polypeptide.
CC The fibronectin binding protein or polypeptide is useful in the
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC related development of carious lesions, gingivitis, calculus or
CC periodontal disease and to combat oral cavity infections, eg.
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC Staphylococcus aureus with a P838T substitution. (Updated on 16-OCT-2003
CC to standardise OS field)

 PT Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 PT stored on computer readable medium and used in the production of anti-
 PT S.aureus vaccines.
 XX
 PS Claim 23; Page 3259-3261; 3271pp; English.
 XX
 CC This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the S.aureus proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the S.aureus DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against S.aureus infection. The polypeptides can also be used in a kit
 CC for the immunodetection of S.aureus in a sample. S.aureus is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 S.aureus DNA sequences
 CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysts of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides";
Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).

-1- FUNCTION: The ability of bacteria to bind fibronectin has been
proposed as a virulence factor enabling bacteria to colonize wound
tissues and blood clots. Binding of plasma fibronectin to the
bacterial surface might block adhesion receptors on S.aureus, thus
representing an important defense mechanism against tissue
invasion.

-1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
an amide bond (Potential).

WPI; 1998-413816/35.

Example 8; Page 102; 201PP; English.

The invention relates to antibodies that bind to a fibronectin-binding

domain of a fibronectin-binding protein, and inhibit binding of the

protein to fibronectin. Also claimed are: (1) isolated peptides of a

fibronectin-binding protein that do not bind to fibronectin; (2) fusion

protein containing at least one peptide of a fibronectin-binding protein

linked to a second amino acid sequence; (3) nucleic acid encoding the

isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

nucleic acids are all useful for immunisation (active or passive) and (by

inhibiting binding of bacteria to fibronectin) for preventing or treating

infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65691-700 represent a series of
 CC synthetic peptides based on the D1 region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

XX Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by *Staphylococci* and *Streptococci*.
 PS Example 8; Page 102; 201pp; English.

CC The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by *staphylococci* or
 CC *streptococci*, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65701-706 represent a series of
 CC synthetic peptides based on the D2 region of *S. aureus* fibronectin

CC binding protein A. They were synthesised to contain mutations

 XX
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published S. aureus
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FnBBB, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FnBA and FnBB gene
 CC sequences

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysts of the total score distribution.

RT	"Nucleotide sequence of the gene for a fibronectin-binding protein			
RT	from <i>Staphylococcus aureus</i> : use of this peptide sequence in the			
RT	synthesis of biologically active peptides."			
RL	Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).			
CC	-I- FUNCTION: The ability of bacteria to bind fibronectin has been			
CC	proposed as a virulence factor enabling bacteria to colonize wound			
CC	tissues and blood clots. Binding of plasma fibronectin to the			
CC	bacterial surface might block adhesion receptors on <i>S.aureus</i> , thus			
CC	representing an important defense mechanism against tissue			
CC	invasion.			
CC	-I- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by			
CC	an amide bond (Potential).

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -!- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (potential).

CC -1 FUNCTION: Decarboxylates l-threonine-O-3-phosphate to yield (R)-1-l-
amino-2-propanol O-2-phosphate, the precursor for the linkage
between the nucleotide loop and the corrin ring in cobalamin (By
similarity)
CC -1 CATALYTIC ACTIVITY: l-threonine O-3-phosphate = (R)-1-amino-2-propa-
nol + CO(2).
CC -1 COFACTOR: Pyridoxal phosphate (by similarity).
CC -1 PATHWAY: Adenosylcobalamín biosynthesis; conversion of
adenosylcobyrinic acid to adenosylcobamidate.
CC CC SIMILARITY: Belongs to the class-II pyridoxal-phosphate-dependent
amino-transferase family.

PT Antibody that binds to fibronectin-binding protein, preventing its

PT binding to fibronectin - used to treat or prevent bacterial infection,

PT especially by Staphylococci and Streptococci.

XX Example 8; Page 102; 201p; English.

The invention relates to antibodies that bind to a fibronectin-binding domain of a fibronectin-binding protein, and inhibit binding of the protein to a fibronectin. Also claimed are: (1) isolated peptides of a fibronectin-binding protein that do not bind to fibronectin; (2) fusion protein containing at least one peptide of a fibronectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronectin) for preventing or creating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65701-706 represent a series of
 CC synthetic peptides based on the D2 region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

XX New bovine herpes virus-2 vectors.
 PT Example 2; Fig 8A-B; 130pp; English.

XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukin (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published *S. aureus*
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FnBAB, cloned for use in this invention, has 97.8 percent
 CC identity when compared to the previously published FnBA and FnBB gene
 CC sequences

Antibody that interacts with collagen binding domain of Staphylococcal

cna gene product - useful to prevent bacterial sepsis in animal infected

with Staphylococcus aureus.

PS Disclosure; Page 91; 143pp; English.

CC This protein comprises Staphylococcus aureus fibronectin-binding

CC microbial surface component regionising adhesive matrix molecule (MSCRAMM)

CC derivative PQD, plus a vector-derived N-terminal peptide. The invention

CC relates to claimed nucleic acid sequences (see AA793436-38) encoding S.

CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see

CC AA793436-38) that confer protection against S. aureus infection. CBP

CC protein and antigenic epitopes are contemplated for use in the treatment

CC of pathological infections, especially to prevent bacterial adhesion to

CC collagen. The epitopes are also contemplated for use in the preparation

CC of vaccines and as carrier proteins in vaccine formulations, as well as

CC in the formulation of compositions for the prevention of S. aureus

CC infection. PCR33 and PQD (see AA793436) were used to raise anti-MSCRAMM

CC polyclonal antibodies used in passive immunisation against bovine

CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-

CC AUG-2003 to correct OS field.)

Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -

useful for immunisation and topical application to prevent staphylococcal

infections.

PS Disclosure; Fig. 8A:1-8A:2; 23pp; English.

CC The S. aureus fibronectin binding protein may be included in a hybrid

CC protein. The protein may be used to immunise ruminants against

CC staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3

CC doses at 1-3 week intervals; and for topical applicn. to prevent wound

CC infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.

CC The DNA encoding the binding protein and the hybrid protein may be

CC immobilised on a carrier and used to diagnose staphylococcal infections.

CC The invention relates to antisense inhibitors of genes essential to
CC prokaryotic cellular proliferation, their use in identifying the genes,
CC their use in the discovery of novel antibiotics, the essential genes
CC themselves and the encoded proteins. The prokaryotes used are Escherichia
CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae,
CC Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also
CC useful for the identification of potential new targets for antibiotic
CC development. The antisense nucleic acids can also be used to identify
CC proteins used in proliferation, to express these proteins, and to obtain
CC antibodies capable of binding to the expressed proteins. The proteins can
CC be used to screen compounds in rational drug discovery programmes. The
CC antisense nucleic acid sequence is also useful to screen for homologous
CC nucleic acids which are required for cell proliferation in a wide variety
CC of organisms. The present sequence represents an essential prokaryotic
CC cellular proliferation protein. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at

 PT Identifying, isolating and producing hyperimmune serum-reactive antigens
 PT from a pathogen, for preparing vaccine or medicament for treating or
 PT preventing e.g. staphylococcal infections, comprises providing antibody
 PT preparation.
 XX
 PS Example 7; Page 157; 252pp; English.
 XX
 CC The invention relates to a novel method for identifying, isolating and
 CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
 CC allergen, a tissue or host prone to auto-immunity, where the antigens are
 CC used in a vaccine, comprises providing antibody preparation from a plasma
 CC pool of a type of animal, or individual sera with antibodies against the
 CC specific pathogen, tumour, allergen, tissue or host prone to auto-
 CC immunity. The hyperimmune serum-reactive antigens comprising any of the
 CC 62 sequences of 53-2261 amino acids fully defined in the specification,
 CC or their hyperimmune fragments are useful for the manufacture of a
 CC pharmaceutical preparation, particularly a vaccine against staphylococcal
 CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
 CC preparation of antibodies is useful for the manufacture of a medicament
 CC for treating or preventing staphylococcal infections or colonisation
 CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
 CC be used for diagnostic and imaging purposes. Other conditions that can be
 CC treated include cancer, autoimmune diseases or infections caused by viral
 CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
 CC sequence represents a staphylococcal protein relating to the method for
 CC identifying and producing pathogen specific antigens of the invention

 PT New Staphylococcus aureus protein, useful as a vaccine for treating or
 PT preventing Staphylococcal infection, specifically an infection caused by
 PT *S. aureus*, e.g. sepsis.
 XX
 PS Claim 1; SEQ ID NO 3554; 49pp; English.
 XX
 CC The invention relates to novel genes and encoded proteins from
 CC Staphylococcus aureus. A composition comprising the *S. aureus* protein, a
 CC nucleic acid encoding the protein, or an antibody to the protein, is
 CC useful as a pharmaceutical, particularly as a vaccine for treating or
 CC preventing infection due to Staphylococcus bacteria, specifically an
 CC infection caused by *S. aureus*. The composition is particularly useful for
 CC treating or preventing sepsis in a patient. The composition can also be
 CC used for diagnostics. The protein is also used in an assay for enzymatic
 CC studies and as a target for antibiotics. This sequence represents one of
 CC the novel *S. aureus* proteins of the invention

 XX Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 PT stored on computer readable medium and used in the production of anti-
 PT *S. aureus* vaccines.

XX Claim 23; Page 3263-3267; 3271pp; English.
XX
PS This sequence represents a Staphylococcus aureus protein sequence of the
XX invention. The DNA sequences encoding the S.aureus proteins are recorded
CC on a computer readable medium, preferably selected from a floppy or hard
CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
CC Homology searches using the S.aureus DNA sequences allows putative
CC functions to be assigned so that protein-encoding or regulatory regions
CC of commercial, therapeutic or industrial importance can be obtained.
CC Specifically, sequences which are likely to encode antigens have been
CC identified and these polypeptides can be used in a vaccine composition
CC against S.aureus infection. The polypeptides can also be used in a kit
CC for the immunodetection of S.aureus in a sample. S.aureus is implicated
CC in numerous human diseases, including cellulitis, eyelid infections, food
CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
CC DNA sequences can be used for recombinant production of the polypeptides.
CC The new DNA sequences (and their fragments) are useful as primers or
CC probes for isolating homologues of any of the 5191 S.aureus DNA sequences
CC contained on the computer readable medium

PT useful for combating infection at wound sites, surgical implants, etc.
PT and as antiladherent agent in oral hygiene.
XX
PS Claim 5; Page 26; 38pp; English.
XX
XX The present sequence is the S. aureus fibronectin binding protein
CC polypeptide D2D3, which can be used to prevent adhesion of (e.g. gram
CC positive) bacteria, to extra-cellular matrix proteins on in-dwelling

CC devices, e.g. catheters or in wounds. D2D3 can also be used to prevent
CC oral pathogens from binding to extra-cellular matrix proteins, in the
CC oral cavity. D2D3 was found to be effective at inhibiting S. aureus 8325-
CC 4, and 120 adhesion to fibronectin coated PMMA coverslips, at a min.
CC adhesion inhibitor concn. of 10 microg/mL. D2D3 was derived from the D2
CC and D3 regions of the S. aureus J2385 (NCIMB 40532) fibronectin binding
CC protein

XX Claim 5; Page 32; 41pp; English.
PS
XX
XX Adherence of oral pathogens, particularly to tooth surfaces, can be
CC prevented by application of a fibronectin binding protein or polypeptide.
CC The fibronectin binding protein or polypeptide is useful in the
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC related development of carious lesions, gingivitis, calculus or
CC periodontal disease and to combat oral cavity infections, eg.
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC Staphylococcus aureus

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

from Staphylococcus aureus: use of this peptide sequence in the
synthesis of biologically active peptides."
Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -!- FUNCTION: The ability of bacteria to bind fibronectin has been
proposed as a virulence factor enabling bacteria to colonize wound
tissues and blood clots. Binding of plasma fibronectin to the
bacterial surface might block adhesion receptors on S.aureus, thus
representing an important defense mechanism against tissue
invasion.
CC -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
an amide bond (Potential).

CC The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65659-68 represent synthetic

 PT New bovine herpes virus-2 vectors.
 PS Example 2; Fig 8A-B; 130pp; English.
 XX
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published S. aureus
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FNBA, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FNBA and FNBB gene
 CC sequences

 XX
 CC This protein comprises Staphylococcus aureus fibronectin-binding
 CC microbial surface component regioning adhesive matrix molecule (MSCRAMM)
 CC derivative pOD, plus a vector-derived N-terminal peptide. The invention
 CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
 CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
 CC AAW31552-54) that confer protection against S. aureus infection. CBP
 CC protein and antigenic epitopes are contemplated for use in the treatment
 CC of pathological infections, especially to prevent bacterial adhesion to
 CC collagen. The epitopes are also contemplated for use in the preparation
 CC of vaccines and as carrier proteins in vaccine formulations, as well as
 CC in the formulation of compositions for the prevention of S. aureus
 CC infection. pCPf3 and pOD (see AAW31556) were used to raise anti-MSCRAMM
 CC polyclonal antibodies used in passive immunisation against bovine
 CC mastitis (updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
 CC AUG-2003 to correct OS field.)

XX Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
PT useful for immunisation and topical application to prevent staphylococcal
PT infections.
XX
PS Disclosure; Fig. 8A:1-8A:2; 23pp; English.
XX
CC The S.aureus fibronectin binding protein may be included in a hybrid
CC protein. The protein may be used to immunise runnants against
CC staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3
CC doses at 1-3 week intervals; and for topical applic. to prevent wound
CC infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.
CC The DNA encoding the binding protein and the hybrid protein may be
CC immobilised on a carrier and used to diagnose staphylococcal infections.
CC (Updated on 25-MAR-2003 to correct PA field.)

PT New polynucleotides for the identification and development of
PT antibiotics, comprise sequences of antisense nucleic acids.
XX
PS Example 3; SEQ ID NO 12838; 51pp; English.
XX
CC The invention relates to antisense inhibitors of genes essential to
CC prokaryotic cellular proliferation, their use in identifying the genes,
CC their use in the discovery of novel antibiotics, the essential genes

CC themselves and the encoded proteins. The prokaryotes used are Escherichia
CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae,
CC Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also
CC useful for the identification of potential new targets for antibiotic
CC development. The antisense nucleic acids can also be used to identify
CC proteins used in proliferation, to express these proteins, and to obtain
CC antibodies capable of binding to the expressed proteins. The proteins can
CC be used to screen compounds in rational drug discovery programmes. The
CC antisense nucleic acid sequence is also useful to screen for homologous
CC nucleic acids which are required for cell proliferation in a wide variety
CC of organisms. The present sequence represents an essential prokaryotic
CC cellular proliferation protein. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at

XX Identifying, isolating and producing hyperimmune serum-reactive antigens
 PT from a pathogen, for preparing vaccine or medicament for treating or
 PT preventing e.g. staphylococcal infections, comprises providing antibody
 PT preparation.

XX Example 7; Page 157; 252pp; English.

XX The invention relates to a novel method for identifying, isolating and
 CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
 CC allergen, a tissue or host prone to auto-immunity, where the antigens are
 CC used in a vaccine, comprises providing antibody preparation from a plasma
 CC pool of a type of animal, or individual sera with antibodies against the
 CC specific pathogen, tumour, allergen, tissue or host prone to auto-
 CC immunity. The hyperimmune serum-reactive antigens comprising any of the

CC 62 sequences of 53-2261 amino acids fully defined in the specification,
 CC or their hyperimmune fragments are useful for the manufacture of a
 CC pharmaceutical preparation, particularly a vaccine against staphylococcal
 CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
 CC preparation of antibodies is useful for the manufacture of a medicament
 CC for treating or preventing staphylococcal infections or colonisation
 CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
 CC be used for diagnostic and imaging purposes. Other conditions that can be
 CC treated include cancer, autoimmune diseases or infections caused by viral
 CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
 CC sequence represents a staphylococcal protein relating to the method for
 CC identifying and producing pathogen specific antigens of the invention

 PT preventing *Staphylococcal* infection, specifically an infection caused by
 PT *S. aureus*, e.g. sepsis.

XX Claim 1; SEQ ID NO 3554; 49pp; English.

XX The invention relates to novel genes and encoded proteins from

CC *Staphylococcus aureus*. A composition comprising the *S. aureus* protein, a

CC nucleic acid encoding the protein, or an antibody to the protein, is

CC useful as a pharmaceutical, particularly as a vaccine for treating or

CC preventing infection due to *Staphylococcus* bacteria, specifically an

CC infection caused by *S. aureus*. The composition is particularly useful for

CC treating or preventing sepsis in a patient. The composition can also be

CC used for diagnostics. The protein is also used in an assay for enzymatic

CC studies and as a target for antibodies. This sequence represents one of

RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides.";
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703 (1989).
CC -!- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (potential).
CC

PT Antibody that binds to fibrinogen-binding protein, preventing its binding to fibrinogen - used to treat or prevent bacterial infection, especially by *Staphylococci* and *Streptococci*.

PS Example 9; Page 110; 201pp; English

The invention relates to antibodies that bind to a fibronectin-binding domain of a fibronectin-binding protein, and inhibit binding of the protein to fibronectin. Also claimed are: (1) isolated peptides of a fibronectin-binding protein that do not bind to fibronectin; (2) fusion protein containing at least one peptide of a fibronectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies; the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (b) inhibiting binding of bacteria to fibronectin) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

XX Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.

PS Claim 42; Page 105; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. The present sequence represents a

CC specifically claimed peptide

XX XX
XX PT Antibody that binds to fibronectin-binding protein, preventing its
XX PT binding to fibronectin - used to treat or prevent bacterial infection,
XX PT especially by Staphylococci and Streptococci.

```

```

XX XX Example 8; Page 102; 201pp; English.
XX PS
XX CC The invention relates to antibodies that bind to a fibronectin-binding
XX CC domain of a fibronectin-binding protein, and inhibit binding of the
XX CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX CC protein containing at least one peptide of a fibronectin-binding protein
XX CC linked to a second amino acid sequence; (3) nucleic acid encoding the
XX CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX CC nucleic acids are all useful for immunisation (active or passive) and (by
XX CC inhibiting binding of bacteria to fibronectin) for preventing or treating
XX CC infection in humans or other animals, particularly by staphylococci or
XX CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
XX CC mastitis in cattle, abortion in horses and many others. Since the
XX CC antibodies block binding of bacteria, they should be effective against
XX CC antibiotic-resistant strains, and may replace antibiotic therapy or
XX CC increase its effectiveness. Sequences AAM65691-700 represent a series of
XX CC synthetic peptides based on the D1 region of S. aureus fibronectin
XX CC binding protein A. They were synthesised to contain mutations

XX Polypeptide(s) derived from Staphylococcus aureus fibronectin binding
 PT protein - inhibit binding of bacteria to extracellular matrix proteins,
 PT for combating infection at the site of wounds and surgical implants, and
 PT in oral hygiene.

XX Claim 6; Page 24; 35pp; English.

XX AAR90937-R90942 represent D3D4 polypeptides. These sequences correspond
 CC to fragments of the Staphylococcus aureus fibronectin binding protein
 CC (Fbp). This sequence corresponds to residues 18-130 of S. aureus J2385
 CC Fbp, and also contains the D2 region, and a portion of the D1 region.
 CC These sequences, and monoclonal antibodies against them can be used to
 CC combat infection at the site of wound, surgical implants and other in-
 CC dwelling devices (such as catheters), and as adherent agents in oral
 CC hygiene. They can also be used in the manufacture of a medicament for the
 CC prevention of adhesion of bacteria to extracellular matrix proteins
 CC present on in-dwelling devices or in wounds, or of oral pathogens to
 CC similar proteins on surfaces in the oral cavity

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Result No.	Score	Query Match	Length	ID	Description
1	53	100.0	10	US-10-731-238-73	Sequence 73, Appl

 from Staphylococcus aureus: use of this peptide sequence in the
 synthesis of biologically active peptides.";
 RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on S.aureus, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (potential).
 CC

XX Antibody that binds to fibrinectin-binding protein, preventing its

XX binding to fibrinectin - used to treat or prevent bacterial infection,

XX especially by Staphylococci and Streptococci.

XX Example 9; Page 110; 20pp; English.

The invention relates to antibodies that bind to a fibrinectin-binding domain of a fibrinectin-binding protein, and inhibit binding of the protein to fibrinectin. Also claimed are: (1) isolated peptides of a fibrinectin-binding protein that do not bind to fibrinectin; (2) fusion protein containing at least one peptide of a fibrinectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibrinectin) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or
XX streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
XX mastitis in cattle, abortion in horses and many others. Since the
XX antibodies block binding of bacteria, they should be effective against
XX antibiotic-resistant strains, and may replace antibiotic therapy or
XX increase its effectiveness. Sequences AAW65659-68 represent synthetic
XX epitopes from the fibronectin binding domains DU and DI-D4 of the S.
XX aureus fnbA gene

XX PT Antibody that binds to fibronectin-binding protein, preventing its
XX binding to fibronectin - used to treat or prevent bacterial infection,
XX especially by Staphylococci and Streptococci.

```

```

XX PS Example 8; Page 102; 201pp; English.
XX CC The invention relates to antibodies that bind to a fibronectin-binding
XX domain of a fibronectin-binding protein, and inhibit binding of the
XX protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX protein containing at least one peptide of a fibronectin-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or
XX streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
XX mastitis in cattle, abortion in horses and many others. Since the
XX antibodies block binding of bacteria, they should be effective against
XX antibiotic-resistant strains, and may replace antibiotic therapy or
XX increase its effectiveness. Sequences AAW65691-700 represent a series of
XX synthetic peptides based on the DI region of S. aureus fibronectin
XX binding protein A. They were synthesised to contain mutations

PT Polypeptide(s) derived from *Staphylococcus aureus* fibronectin binding
 PT protein - inhibit binding of bacteria to extracellular matrix proteins,
 PT for combating infection at the site of wounds and surgical implants, and
 PT in oral hygiene.

PS Claim 6; Page 24; 35pp; English.

XX AAR90937-R30942 represent D3D4 polypeptides. These sequences correspond
 CC to fragments of the *Staphylococcus aureus* fibronectin binding protein
 CC (Fbp). This sequence corresponds to residues 18-130 of *S. aureus* J3385
 CC Fbp, and also contains the D2 region, and a portion of the D1 region.
 CC These sequences, and monoclonal antibodies against them can be used to
 CC combat infection at the site of wounds, surgical implants and other in-
 CC dwelling devices (such as catheters), and as antiaherent agents in oral
 CC hygiene. They can also be used in the manufacture of a medicament for the
 CC prevention of adhesion of bacteria to extracellular matrix proteins
 CC present on in-dwelling devices or in wounds, or of oral pathogens to
 CC similar proteins on surfaces in the oral cavity

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

SUMMARIES

Result No.	Score	Query Match	Length	ID	Description

RT synthesis of biologically active peptides.";
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).
CC CC

CC -1- FUNCTION: Produces ATP from ADP in the presence of a proton
CC gradient across the membrane. The beta chain is the catalytic
CC subunit.
CC -1- CATALYTIC ACTIVITY: ATP + H(2)O + H(+) (In) = ADP + phosphate +
CC H(+) (Out).
CC -1- SUBUNIT: F-type ATPases have 2 components, CF(1) - the catalytic
CC core - and CF(0) - the membrane proton channel. CF(1) has five
CC subunits: alpha(3), beta(3), gamma(1), delta(1), epsilon(1). CF(0)
CC has three main subunits: a, b and c.
CC -1- SIMILARITY: Belongs to the ATPase alpha/beta chains family.

XX The invention relates to antibodies that bind to a fibronectin-binding

XX domain of a fibronectin-binding protein, and inhibit binding of the

XX protein to a fibronectin. Also claimed are: (1) isolated peptides of a

XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion

XX protein containing at least one peptide of a fibronectin-binding protein

XX linked to a second amino acid sequence; (3) nucleic acid encoding the

XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

XX nucleic acids are all useful for immunisation (active or passive) and (by

XX inhibiting binding of bacteria to fibronectin) for preventing or treating

XX infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g., meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

 DR
 XX Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PR especially by Staphylococci and Streptococci.
 XX
 XX Example 8; Page 102; 201pp; English.
 XX
 XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65691-700 represent a series of
 CC synthetic peptides based on the D1 region of S. aureus fibronectin
 CC binding protein A. They were synthesised to contain mutations

RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides.";
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

PT Antibody that binds to fibronectin-binding protein, preventing its

PT binding to fibronectin - used to treat or prevent bacterial infection,

PT especially by Staphylococci and Streptococci.

PT Example 9; Page 110; 20pp; English.

PS The invention relates to antibodies that bind to a fibronectin-binding

PS domain of a fibronectin-binding protein, and inhibit peptides of a

PS fibronectin-binding protein that do not bind to fibronectin; (2) fusion

PS protein containing at least one peptide of a fibronectin-binding protein

PS linked to a second amino acid sequence; (3) nucleic acid encoding the

PS isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

PS nucleic acids are all useful for immunisation (active or passive) and (by

PS inhibiting binding of bacteria to fibronectin) for preventing or treating

PS infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g., meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
 PT useful for immunisation and topical application to prevent staphylococcal
 PT infections.

PS Claim 11; Page 12; 23pp; English.

CC The peptide has fibronectin binding ability. It is useful for immunising
 CC ruminants against staphylococcal mastitis, pref. when used at 0.5-5
 CC micrograms/kg, using 3 doses given at 1-3 week intervals; for topical
 CC application to prevent wound infection, using an isotonic saline soln. of
 CC concn. 25-250 micrograms/ml; and, when immobilised on a carrier, for
 CC diagnosing staphylococcal infections. (Updated on 25-MAR-2003 to correct
 CC Pf field.) (Updated on 25-MAR-2003 to correct PA field.)

 XX

CC The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65691-700 represent a series of
 CC synthetic peptides based on the DI region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RA Signaes C., Raucet G., Joeneson K., Lindgren P.-E.,
RA Anantharamiah G.M., Hoeck M., Lindberg M.;
RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S. aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

XX
XX The invention relates to antibodies that bind to a fibronec-binding
XX domain of a fibronec-binding protein, and inhibit binding of the
XX protein to a fibronec. Also claimed are: (1) isolated peptides of a
XX fibronec-binding protein that do not bind to fibronec; (2) fusion
XX protein containing at least one peptide of a fibronec-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronec) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
CC peptides which were synthesised to span the D1 motif and the N-terminal
CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
CC with the previous sequence

 XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65691-700 represent a series of
 CC synthetic peptides based on the DI region of S. aureus fibronectin
 CC binding protein A. They were synthesised to contain mutations

PT protein - inhibit binding of bacteria to extracellular matrix proteins,

PT for combating infection at the site of wounds and surgical implants, and

PT in oral hygiene.

XX Claim 6; Page 24; 35pp; English.

XX AAR90937-R90942 represent D3D4 polypeptides. These sequences correspond

CC to fragments of the Staphylococcus aureus fibronectin binding protein

CC (Fbp). This sequence corresponds to residues 18-130 of S.aureus J2385

CC Fbp, and also contains the D2 region, and a portion of the D1 region.
 CC These sequences, and monoclonal antibodies against them can be used to
 CC combat infection at the site of wounds, surgical implants and other in-
 CC dwelling devices (such as catheters), and as antiadherent agents in oral
 CC hygiene. They can also be used in the manufacture of a medicament for the
 CC prevention of adhesion of bacteria to extracellular matrix proteins
 CC present on in-dwelling devices or in wounds, or of oral pathogens to
 CC similar proteins on surfaces in the oral cavity

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides.";
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -!- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

XX Antibody that binds to fibronectin-binding protein, preventing its
PT binding to fibronectin - used to treat or prevent bacterial infection,
PT especially by Staphylococci and Streptococci.
XX
PS Example 9; Page 110; 201pp; English.
XX
XX The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

 PT Polypeptide(s) derived from Staphylococcus aureus fibronectin binding
 PT protein - inhibit binding of bacteria to extracellular matrix proteins,
 PT for combating infection at the site of wounds and surgical implants, and
 PT in oral hygiene.
 XX
 PS Claim 6; Page 24; 35pp; English.

XX AAR90937-R30942 represent D3D4 polypeptides. These sequences correspond
 CC to fragments of the Staphylococcus aureus fibronectin binding protein
 CC (Fbp). This sequence corresponds to residues 18-130 of S.aureus J2385
 Fbp, and also contains the D2 region, and a portion of the D1 region.

CC These sequences, and monoclonal antibodies against them can be used to
 CC combat infection at the site of wounds, surgical implants and other in-
 CC dwelling devices (such as catheters), and as antichaperon agents in oral
 CC hygiene. They can also be used in the manufacture of a medicament for the
 CC prevention of adhesion of bacteria to extracellular matrix proteins
 CC present on in-dwelling devices or in wounds, or of oral pathogens to
 CC similar proteins on surfaces in the oral cavity

CC This protein comprises Staphylococcus aureus fibronectin-binding
CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)
CC derivative pOD, plus a vector-derived N-terminal peptide. The invention
CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
CC AAW31552-54) that confer protection against S. aureus infection. CBP
CC protein and antigenic epitopes are contemplated for use in the treatment
CC of pathological infections, especially to prevent bacterial adhesion to
CC collagen. The epitopes are also contemplated for use in the preparation
CC of vaccines and as carrier proteins in vaccine formulations, as well as
CC in the formulation of compositions for the prevention of S. aureus
CC infection. pCF33 and pOD (see AAW31556) were used to raise anti-MSCRAMM
CC polyclonal antibodies used in passive immunisation against bovine
CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
CC AUG-2003 to correct OS field.)

BD	Polypeptide(s) derived from Staphylococcus aureus fibronectin binding	
BE	protein - inhibit binding of bacteria to extracellular matrix proteins,	
BF	for combatting infection at the site of wounds and surgical implants, and	
BG	in oral hygiene.	
BH	Claim 6; Page 24; 35pp; English.	
BI	AA90937-R09042 represent D3D4 polypeptides. These sequences correspond	
BJ	to fragments of the Staphylococcus aureus fibronectin binding protein	
BK	(Fbp). This sequence corresponds to residues 18-181 of S.aureus J2385	
BL	(Fbp), and also contains the D2 region, a portion of the D1 region, and a	
BM	portion of the wall region 1 (WRI1). These sequences, and monoclonal	
BN	antibodies against them can be used to combat infection at the site of	
BO	wounds, surgical implants and other in-dwelling devices (such as	
BP	catheters), and as antiadherent agents in oral hygiene. They can also be	
BQ	used in the manufacture of a medicament for the prevention of adhesion of	
BR	bacteria to extracellular matrix proteins present on in-dwelling devices	
BS	or in wounds, or of oral pathogens to similar proteins on surfaces in the	
BT	oral cavity

 PT Prevention of adherence of oral pathogens in the oral cavity, partic.
 PT tooth surfaces - by application of a fibronectin binding protein or
 PT polypeptide or a monoclonal antibody or fragment against it.
 XX
 PS Claim 5; Page 32; 41pp; English.
 XX
 CC Adherence of oral pathogens, particularly to tooth surfaces, can be
 CC prevented by application of a fibronectin binding protein or polypeptide.
 CC The fibronectin binding protein or polypeptide is useful in the
 CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
 CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
 CC related development of carious lesions, gingivitis, calculus or
 CC periodontal disease and to combat oral cavity infections, e.g.
 CC candidiasis. They may also be useful in oral surgery e.g. in guided
 CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to
 CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
 CC Staphylococcus aureus with a P838T substitution. (Updated on 16-OCT-2003
 CC to standardise OS field)

 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from Staphylococcus aureus: use of this peptide sequence in the
 synthesis of biologically active peptides."
 RT Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 RL -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 proposed as a virulence factor enabling bacteria to colonize wound
 tissues and blood clots. Binding of plasma fibronectin to the
 bacterial surface might block adhesion receptors on S. aureus, thus
 representing an important defense mechanism against tissue
 invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 an amide bond (Potential).

This page blank (uspio)

CC streptococci, e.g., meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

XX Polyepitide(s) derived from Staphylococcus aureus fibronectin binding
 PT protein - inhibit binding of bacteria to extracellular matrix proteins,
 PT for combating infection at the site of wounds and surgical implants, and
 PT in oral hygiene.

XX Claim 6; Page 24; 35pp; English.

XX AAR90937-R30942 represent D3D4 polypeptides. These sequences correspond
 CC to fragments of the Staphylococcus aureus fibronectin binding protein
 CC (Fbp). This sequence corresponds to residues 18-130 of S.aureus J2385
 CC Fbp, and also contains the D2 region, and a portion of the D1 region.

CC These sequences, and monoclonal antibodies against them can be used to
 CC combat infection at the site of wounds, surgical implants and other in-
 CC dwelling devices (such as catheters), and as antiadherent agents in oral
 CC hygiene. They can also be used in the manufacture of a medicament for the
 CC prevention of adhesion of bacteria to extracellular matrix proteins
 CC present on in-dwelling devices or in wounds, or of oral pathogens to
 CC similar proteins on surfaces in the oral cavity

 PT New bovine herpes virus-2 vectors.
 XX
 PS Example 2; Fig 8A-B; 130pp; English.
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating

CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published S. aureus
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FnBAB, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FnBA and FnBB gene
 CC sequences

 PS Disclosure; Page 91; 143pp; English.
 XX
 CC This protein comprises Staphylococcus aureus fibronectin-binding
 CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)
 CC derivative pOD, plus a vector-derived N-terminal peptide. The invention
 CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
 CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
 CC AAW1552-54) that confer protection against S. aureus infection. CBP
 CC protein and antigenic epitopes are contemplated for use in the treatment

CC of pathological infections, especially to prevent bacterial adhesion to
CC collagen. The epitopes are also contemplated for use in the preparation
CC of vaccines and as carrier proteins in vaccine formulations, as well as
CC in the formulation of compositions for the prevention of S. aureus
CC infection. PCP33 and POD (see AAW31556) were used to raise anti-MSCRAMM
CC polyclonal antibodies used in passive immunisation against bovine
CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
CC AUG-2003 to correct OS field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RA Anantharamaiah G.M., Hoocek M., Lindberg M.;
RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

XX
XX PT Antibody that binds to fibronectin-binding protein, preventing its
PT binding to fibronectin - used to treat or prevent bacterial infection,
PT especially by Staphylococci and Streptococci.
XX
XX PS Example 9, Page 110; 20pp; English.
XX
XX CC The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

XX New bovine herpes virus-2 vectors.

XX Example 2; Fig 8A-B; 130pp; English.

CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukin (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumor necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC tumourants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published S. aureus
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FNBA, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FnBA and FNBB gene
 CC sequences

CC This protein comprises Staphylococcus aureus fibronectin-binding
 CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)
 CC derivative pOD, plus a vector-derived N-terminal peptide. The invention
 CC relates to claimed nucleic acid sequences (see AA193436-38) encoding S.
 CC aureus collagen binding protein (CBP) epitopes M17, M1 and M5 (see
 CC AAW31552-54) that confer protection against S. aureus infection. CBP
 CC protein and antigenic epitopes are contemplated for use in the treatment
 CC of pathological infections, especially to prevent bacterial adhesion to
 CC collagen. The epitopes are also contemplated for use in the preparation
 CC of vaccines and as carrier proteins in vaccine formulations, as well as
 CC in the formulation of compositions for the prevention of S. aureus
 CC infection. pCF33 and pOD (see AAW31556) were used to raise anti-MSCRAMM
 CC polyclonal antibodies used in passive immunisation against bovine
 CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
 CC AUG-2003 to correct OS field.)

XX
XX New polynucleotides for the identification and development of
PT antibiotics, comprise sequences of antisense nucleic acids.
XX
XX Example 3; SEQ ID NO 5797; 51pp; English.
XX
XX The invention relates to antisense inhibitors of genes essential to
CC prokaryotic cellular proliferation, their use in identifying the genes,
CC their use in the discovery of novel antibiotics, the essential genes
CC themselves and the encoded proteins. The prokaryotes used are Escherichia
CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae,
CC Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also
CC useful for the identification of potential new targets for antibiotic
CC development. The antisense nucleic acids can also be used to identify
CC proteins used in proliferation, to express these proteins, and to obtain
CC antibodies capable of binding to the expressed proteins. The proteins can
CC be used to screen compounds in rational drug discovery programmes. The
CC antisense nucleic acid sequence is also useful to screen for homologous
CC nucleic acids which are required for cell proliferation in a wide variety
CC of organisms. The present sequence represents an essential prokaryotic
CC cellular proliferation protein. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX
XX Identifying, isolating and producing hyperimmune serum-reactive antigens
PT from a pathogen, for preparing vaccine or medicament for treating or
PT preventing e.g. staphylococcal infections, comprises providing antibody
PT preparation.
XX
XX Example 7; Page 157; 252pp; English.
XX
XX The invention relates to a novel method for identifying, isolating and
CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
CC allergen, a tissue or host prone to auto-immunity, where the antigens are
CC used in a vaccine, comprises providing antibody preparation from a plasma
CC pool of a type of animal, or individual sera with antibodies against the
CC specific pathogen, tumour, allergen, tissue or host prone to auto-
CC immunity. The hyperimmune serum-reactive antigens comprising any of the
CC 62 sequences of 53-2261 amino acids fully defined in the specification,
CC or their hyperimmune fragments are useful for the manufacture of a
CC pharmaceutical preparation, particularly a vaccine against staphylococcal
CC infections or colonisation against S. aureus or S. epidermidis. The
CC preparation of antibodies is useful for the manufacture of a medicament
CC for treating or preventing staphylococcal infections or colonisation
CC against S. aureus or S. epidermidis. The antibody preparations may also
CC be used for diagnostic and imaging purposes. Other conditions that can be
CC treated include cancer, autoimmune diseases or infections caused by viral
CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
CC sequence represents a staphylococcal protein relating to the method for
CC identifying and producing pathogen specific antigens of the invention

XX Claim 5; Page 32; 41pp; English.

CC Adherence of oral pathogens, particularly to tooth surfaces, can be
CC
CC prevented by application of a fibronectin binding protein or polypeptide.
CC
CC The fibronectin binding protein or polypeptide is useful in the
CC
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC
CC related development of carious lesions, gingivitis, calculus or
CC
CC periodontal disease and to combat oral cavity infections, e.g.
CC
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC
CC Staphylococcus aureus

PS
XX Example 2; Fig 8A-B; 130pp; English.
XX
XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC comprise at least one cytokine-encoding DNA sequence. The expression of
CC cytokines in mammals can up-regulate immune responses to the immunogens.
CC The cytokine is selected from interleukins (IL), colony stimulating
CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC be used for preventing or treating a mucosal disease in a subject, e.g.
CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC mastitis in cows or breast cancers in humans. They can also be used for
CC preventing or treating a stress-induced disease. The present sequence
CC represents the binding domain of a previously published S. aureus
CC fibronectin binding protein B (FnBB) sequence. The FnB binding domain
CC gene sequence FNBBAB, cloned for use in this invention has 97.8 percent
CC identity when compared to the previously published FnBB and FnBB gene
CC sequences

US-08-459-135A-7
Sequence 7, Application US/08459135A
Patent No. 5955078
GENERAL INFORMATION:
APPLICANT: BURHAM, Martin Karl Russel
APPLICANT: CHOPRA, Ian
APPLICANT: CRITCHLEY, Ian Alfred
APPLICANT: KNOWLES, David Justin Charles
TITLE OF INVENTION: FIBRONECTIN BINDING PROTEIN: MONOCLONAL ANTIBODY AND THEIR US
NUMBER OF SEQUENCES: 15
CORRESPONDENCE ADDRESS:
ADDRESSEE: SmithKline Beecham Corporation
STREET: 709 Swedeland Road
City: King of Prussia
STATE: PA
COUNTRY: U.S.A.
ZIP: 19406-0939
COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette
COMPUTER: IBM Compatible
OPERATING SYSTEM: DOS
SOFTWARE: Fastseq, Version 2.0
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/459,135A
FILING DATE: 02-JUN-1995
CLASSIFICATION: 435
PRIOR APPLICATION DATA:
APPLICATION NUMBER: PCT/GB/94/00215
FILING DATE: 04-Feb-1994
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Gimmil, Edward R
REGISTRATION NUMBER: 38,891
REFERENCE/DOCKET NUMBER: P30591C2
TELEPHONE: 610-270-4478
TELEFAX: 610-270-5090
TELEX:
INFORMATION FOR SEQ ID NO: 7:
SEQUENCE CHARACTERISTICS:
LENGTH: 130 amino acids
TYPE: amino acid
TOPOLOGY: linear
MOLECULE TYPE: protein
US-08-459-135A-7

Query Match : 91.1%; Score 51; DB 2; Length 130;
Best Local Similarity 90.0%; Pred. No. 0.066;
Matches 9; Conservative 1; Mismatches 0; Indels 0; Gaps 0;
